Introduction

Once again it is our pleasure to present you with a copy of our new wholesale list.

As always, our endeavor is to grow the finest plants possible. By selecting the better type plants of all varieties and propagating from them we believe we have accomplished much toward the end. All our plants receive the best possible care: they are root pruned and transplanted so as to develop a fine root system, they are sheared, sprayed, fed, cultivated and watered to assure compact clean plants. Your orders are dug and handled by experienced men in the very finest manner. Our every effort is directed toward developing and growing good heavy plant material offered at the lowest possible price and to merit your confidence and good will.

A price list is indeed a very poor indication of quality. We are offering quality plant material at a fair price, not "selling price" and feel that the value of a plant is seen rather than described. We urge you most cordially to visit our nurseries and inspect our acreage of plant materials. This year in particular we can offer outstanding blocks of many varieties. Our nurseries are located on Rt. 73, three miles south of Reading, Pa. at the village of Angelica.

Yours respectfully,

ANGELICA NURSERIES

RHODODENDRON

HYBRIDS

We are growing approximately 200 varieties of hybrid rhododendron; propagated by stem cuttings and putting all varieties on their own roots. We offer these in most varieties in quantity and in sizes ranging from rooted cuttings to heavy landscape material.

ROOTED CUTTINGS AND 1-YR. FLATTED TRANSPLANTS

These plants are furnished with a peat ball. Rooted cuttings are ready approximately May 1, 1956 and 1-yr. flatted transplants are ready now and next Spring. Each winter we propagate from 70 to 100 varieties of hybrid rhododendron. To be sure of the varieties you want we urge you to place your order by November 1, 1955. If you are interested in varieties not listed below, please write us as this listing is not complete.
